

F104 declared collection design

1,500 start/goal groups · 4,500 distinct spatial references · 18,000 PID episode variants · 80 × 80 m unchanged terrain

COMMAND GEOMETRY ONLY — no realized trajectories, safety outcomes or collected-hour totals are shown.

Four speed profiles share each spatial reference. Panel B uses a fixed feature-stratified subset; panel C counts centerline samples once per reference, not vehicle footprints.
